HYPERWIND

FMSO module - "PRACTICAL CASE" 1/2

The aim of this practical case study is to highlight the main benefits of using the FMSO module first when the preventive and / or the contractual maintenance tasks are scheduled and then when unexpected failures appear and the schedule has AIM to be modified as corrective maintenance tasks are required and some already scheduled tasks may be obsolete.

CASE SETUP

- 1 wind farm / 4 Wind Turbines (WT)
- 5 types of logistical means
- 4 preventive + 5 corrective maintenace tasks

• 3 maintenance teams

5	types	U	logistical	mea
5	types	of	failures	

• 5 types of preliminay preparations

				/			/ [/		
	Logistic	cal mean	S	Preliminary pre	eparatio	ns	F	ailures

X	*	*	**	Drain & fill the cooling system	*	*	F5 Cooling system		<u>/</u>

Maintenance tasks description

		Task	Logistical means		Preliminary preparation	Spare parts	Periodicity	Duration	Cost
		Verify main bearing lubrication	£.	•	Main bearing gasket removal	-	Every 10 to 14 weeks	*	*
ntive	•	Verify main bearing clearance	\$\$\ \$\ \$\	•	Main bearing gasket removal	-	Every 22 to 26 weeks	*	*
Preve	•	Verify generator insulation	∽/ _	•	Disconnect & shunt generator electric parts	-	Every 48 to 54 weeks	*	*
	•	Blades inspection	莣 + 😹		-	-	Every 22 to 26 weeks	**	**
		Grease pump replacement	∽ / ⊡ →	•	Lubrification system draining Main bearing gasket removal	-	-	**	**
ð		Blade repair	+		-	-	-	**	***
Corrective		Main bearing replacement		•	Rotor dismounting	0	-	***	***
ပိ		Water pump replacement	×~/ •	•	Cooling system draining & filling	-	-	*	**
		ooling system hoses replacement	∽ / ⊡ →	•	Cooling system draining & filling	-	-	*	*

SCHEDULING THE PREVENTIVE MAINTENANCE TASKS

Optimal schedule

Total cost = Maintenance cost + Production loss

occurrences of a preventive maintenance

✓ Minimize total cost HOW IT

WORKS

Birelistrer Ballissette

- ✓ Comply with contractual constraints
- ✓ Compatible with operational constraints

Operational constraints : maintenance teams & logistical means availability, tasks

Contractual constraints : maximum acceptable length for the period between two

sequencing

HYPERWIND

minimal reservation = 2 weeks
minimal delay before lease = 3 weeks

FMSO module - "PRACTICAL CASE" 2/2

FMSO MODULE

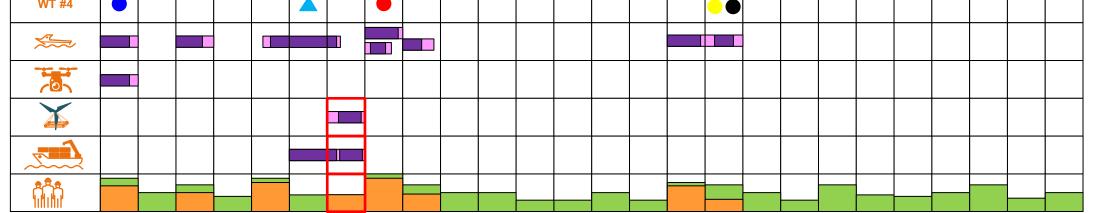

DYNAMIC UPDATE

As time goes by, different wind turbine failures occur and the maintenance schedule needs to be updated by incorporating the required corrective maintenance tasks. Some already scheduled tasks may became obsolete or need to be recheduled.
